

## [Towards the Circular Economy Vol. 2: opportunities for the consumer goods sector](#) [1]

"The report focuses on fast-moving consumer goods, which currently accounts for about 60 per cent of total consumer spending, 35 per cent of material inputs into the economy, and 75 per cent of municipal waste. Importantly, the consumer goods sector absorbs more than 90 per cent of our agricultural output - possibly our most embattled resource in the future."
